

# sobersided.<sup>®</sup>

The Banking Co-Pilot

# The banki EcoSystem:

sobersided®

## Real-Time Interaction

Banki Handles the conversation directly, understanding requirements—loans, deposits, inquiries—in the customer’s native language

Voice ■ Natural Language

real Time Sync

AI Translation & Intent  
Recognition

Drafted Action

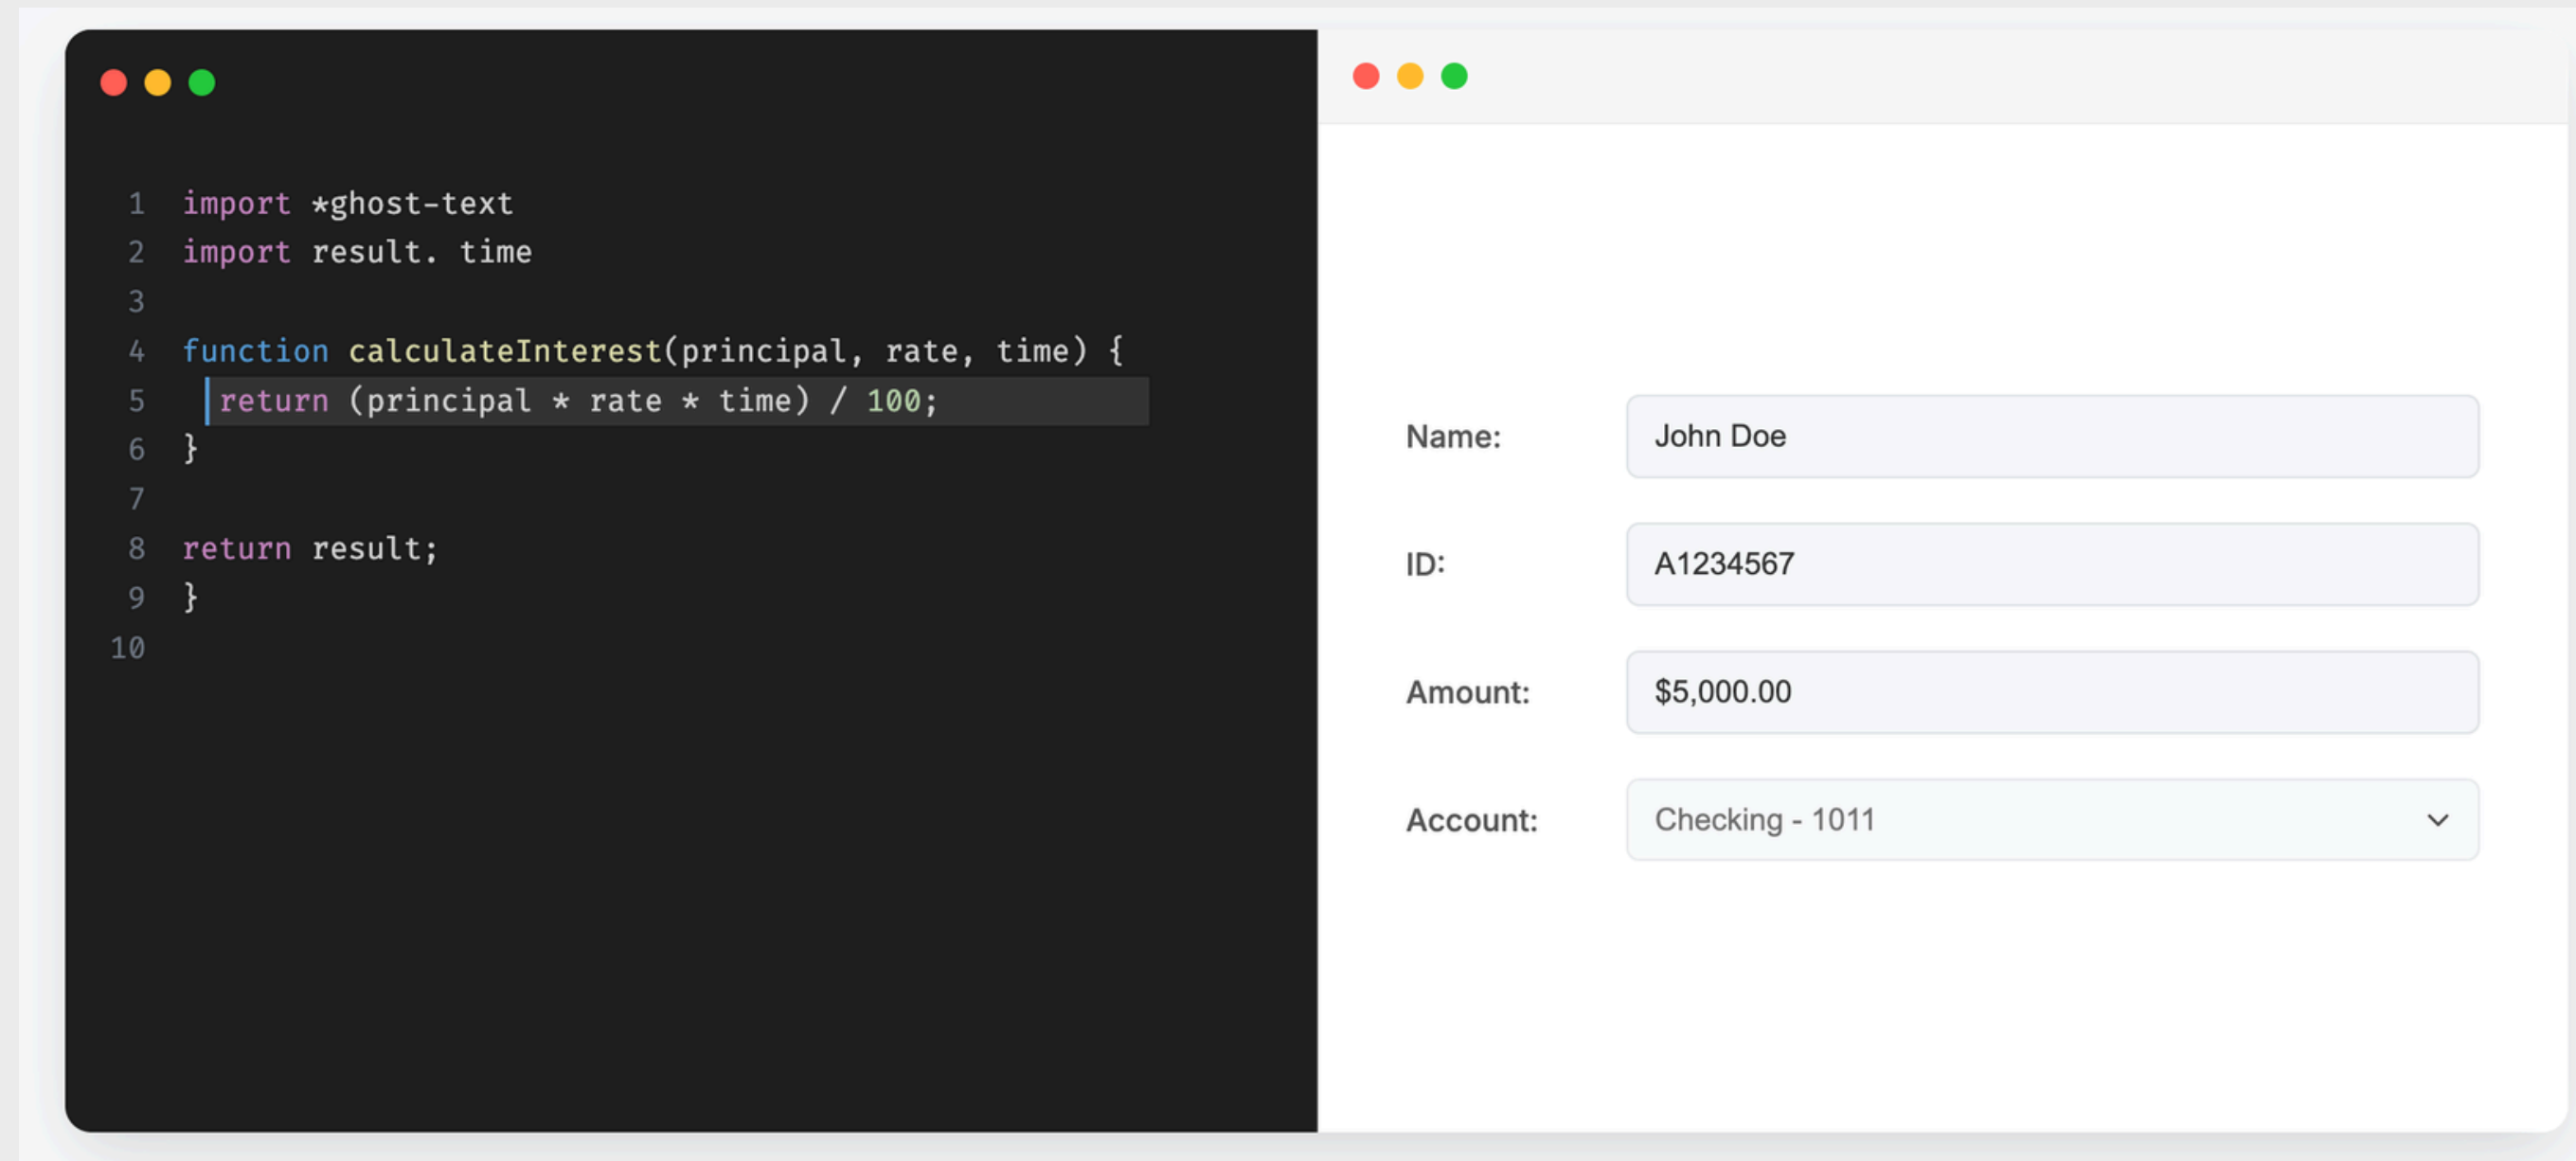

Output ■ Agent Verification Screen

Improving the customer experience while keeping the agent firmly in the driver’s seat

# The 'cursor' for banking officers:

sobersided®

AI coding tools: Engineer Approves code

Banki: Officer Approves Transmission

The same logic: Supervised Automation

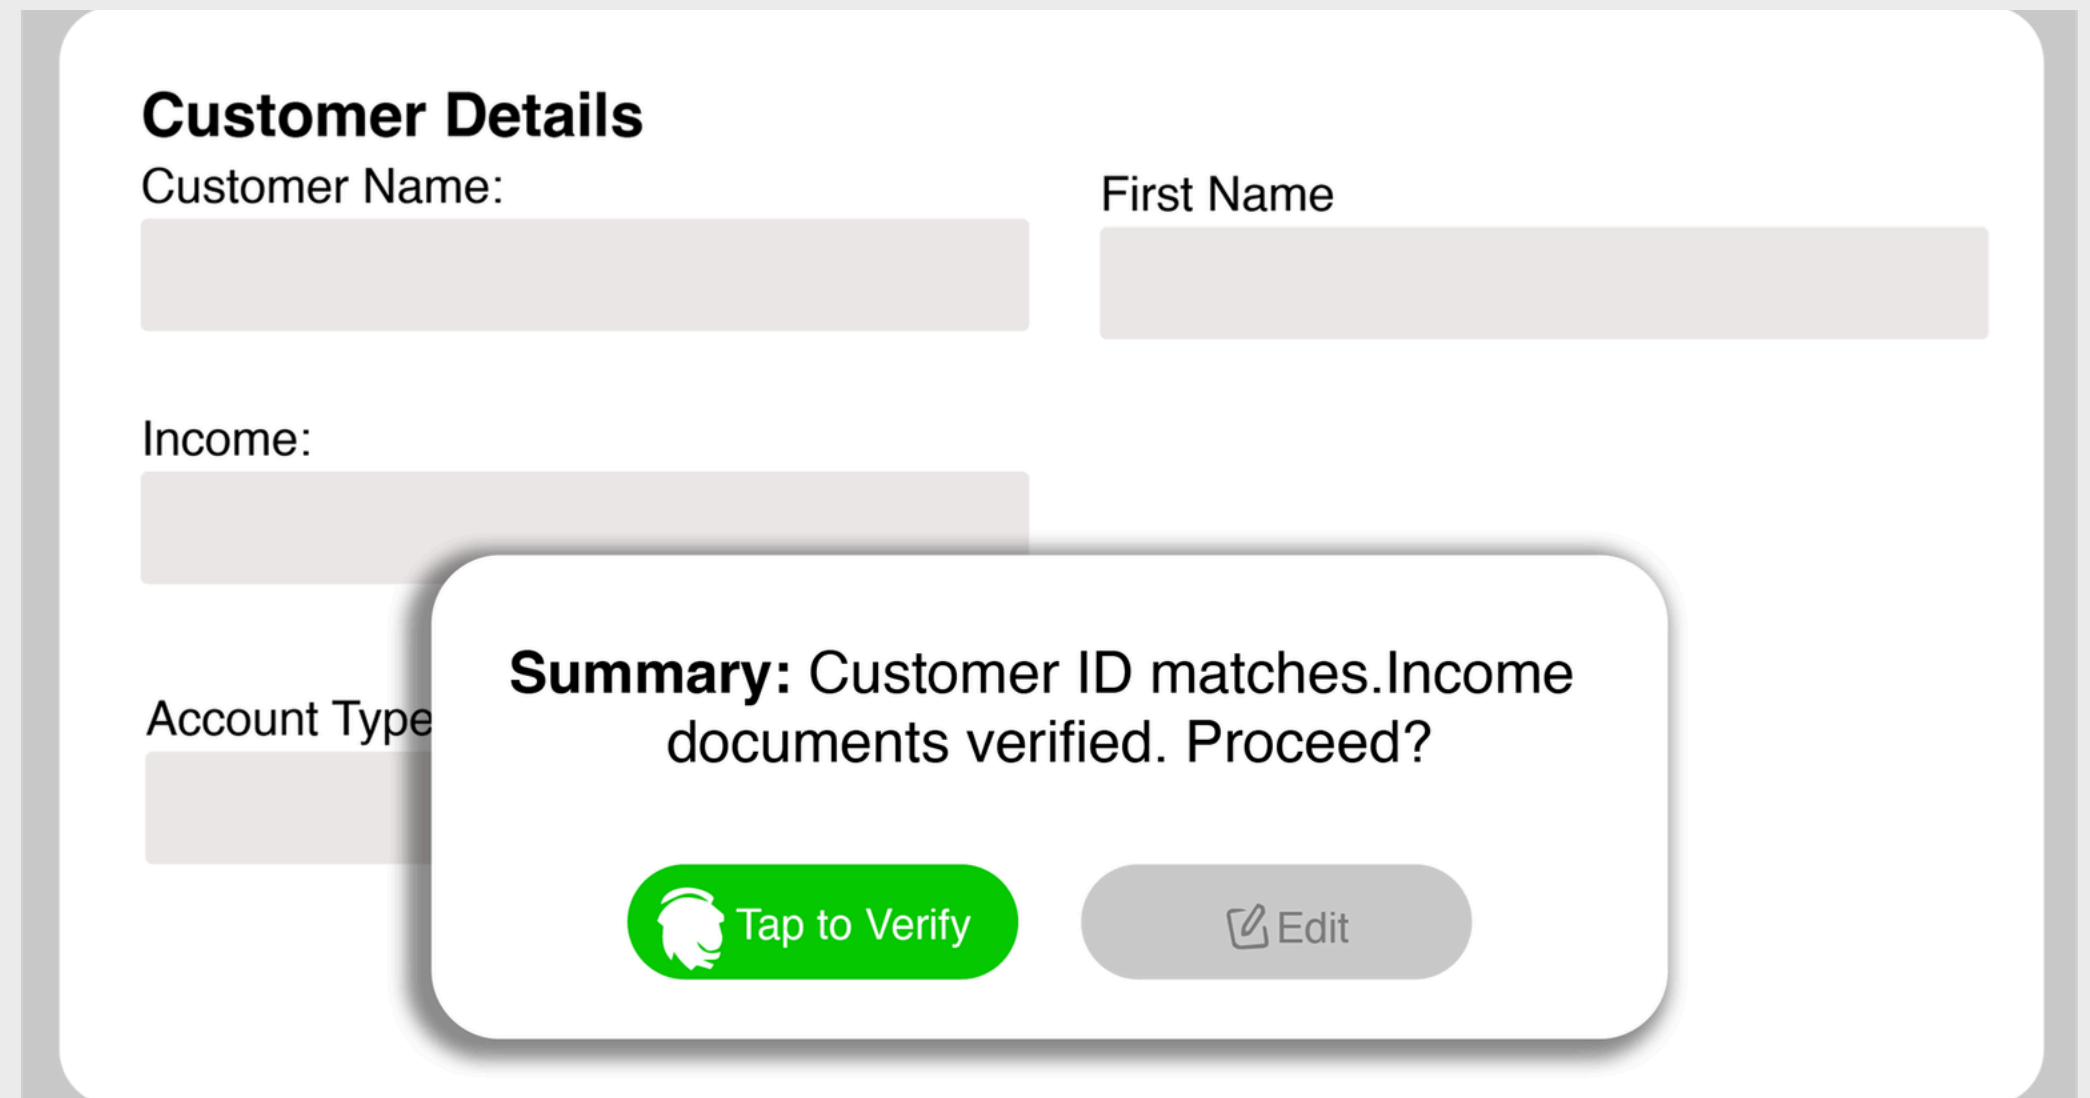

# Streamlined Conversational Verified.

## Auditory Summery

Instead of forcing the officer to read every line, Banki reads the summary aloud (eg: customer id matches. Income Verified.”)

## Biometric approval

The officer simply replies or uses a biometric tap to confirm.

**Customer Details**

Customer Name:

First Name

Income:

Account Type

**Summary:** Customer ID matches. Income documents verified. Proceed?

 Tap to Verify  Edit

Transform a monotonous reading task into a swift, secure, and engaging workflow.

# Integration Strategy: The 'Layer' Approach

## No Code Rewrites

We do not attempt to rewrite legacy code; instead, Banki functions as a supervised layer on top.

## RPA Deployment:

We use Robotic Process Automation to "type" data into the old system just like a human would, but at lightning speed.

## Scalability:

This allows deployment in rural branches tomorrow without waiting 5 years for a core banking upgrade. Low-risk, high-reward.

# Social Impact Decent Work

From:  
Data Entry  
Clerk

To:  
Financial  
Advisor

Technology often threatens to take jobs. Banki does the opposite. We use AI to remove the drudgery from the job so the human can focus on the relationship. We are modernizing the economy by elevating the dignity of work.

# Team Tekkeys: Built for This Problem

Javeen (Lead Developer)

The Insider

Combines technical skill with real-world banking experience—knows exactly where the system breaks because he worked inside inside it.

Kesaru (Automation Architect)

The Builder. Background in web hosting management; obsessed with replacing mundane workflows with automated efficiency.

Thathsilu (Creative Lead)

The Designer

Ensures the user experience is intuitive and human-centric.

Nizla (Marketing Strategy)

The Storyteller

Positions the narrative for the right audience.

# The Ask: From Prototype to Pilot

**Current Status:** The technology is ready. The problem is urgent.

**Our Need:** We are seeking mentorship and seed funding to deploy our first prototype in a pilot branch.

**The Goal:** Prove the efficiency gains in a live environment to secure a regional banking partnership.
